

Each BaseRun is in one piece - 2 1/2" from the back edge all the way around the house to 2 1/2" from the other back edge.

Folded corners around the door (no eyelets in folded corners!)

The Attic BaseRun has a zig-zag to lower the run where it is on the kneewall (or you can run the whole Attic Baserun lower than the kneewall and avoid these folds altogether).

Test the folding technique with backing

The first fold is away from the new direction.

The second fold is toward the new direction.

Start the zig-zag 1" or more away from the kneewall

Coming from right to left, (below) the folds on the left work like this:

down forward corner
Coming from right to left (below), the folds on the right work like this:

corner up forward
