

Running the Main Loop After Construction:

Run the Main Loop from the far side of the upper floor (lined up with the Attic Ceiling①) up to the ceiling②, across the ceiling (if the Attic Dividers are already installed, go thru the doorways③) and back up to the

ceiling, then down the near wall ④). You must make two pleated re-directs to go down straight thru the stair cutout, the first 3/4" away from the Front Roof⑤, and the second straight above the Stair cutout⑥. End the Main Loop just above the Base Floor⑦.
